

Complete Tactical Casualty Care

This dynamic and practical course covers the complete evaluation and treatment of the tactical casualty during both the Care Under Fire / Direct Threat, Tactical Field Care / Indirect Threat phases, how it differs from a non-tactical medical situation, and solid preparation of the casualty for the evacuation phase to increase survivability.

This stand-alone course covers all the materials presented in the TCCC and TECC guidelines for medical providers. Discussed are topics ranging from the nature and myths of gunshot wounds, the rapid evaluation of casualties, and the assessment and management of penetrating, blunt, and blast injuries. Also included are detailed airway interventions, surgical airways, intraosseous and intravenous access, fluid resuscitation, and TCCC / TECC relevant medications.

More specifically, the Complete TC2 course includes:

- Assessment and management of massive hemorrhage including extensive practical exercises managing all types of hemorrhage, the safe use of tourniquets, junctional hemorrhage, effectively packing wounds, and hemostatic agents
- Basic airway and breathing assessment, as well as management within a high risk environment, advanced airway management using nasal pharyngeal airways, airway positioning and surgical airways
- In-depth discussion of thoracic trauma (chest injuries), chest seals, recognition of tension pneumothorax and its decompression
- Appropriate treatment of casualties with abdominal injuries, head injuries, ocular injuries, as well as burns, fractures, and mine injuries

- Casualty hypothermia prevention, including use of the Hypothermia Prevention and Management Kit (HPMK) and the Blizzard Bag
- Techniques for moving casualties to a safer location, with detailed training and practice moving casualties efficiently including proper litter use
- Triage of multiple casualties and setting up a Casualty Collection Point
- The reality of fluid resuscitation
- Intraosseous access, and to a lesser extent intravenous access of the casualty

This five-day course, has extensive practical scenarios which utilize trained casualty role players, blank fire, and profuse quantities of theatrical blood. During skills stations and preliminary scenarios, students take turns role-playing a casualty, having tourniquets applied, as well as being drug and lifted. As such, it is advisable not to wear your finest clothing. During the scenario day, students will get fake theatrical blood on them (which can lightly stain skin for a 24 hours, and can stain gear or clothing permanently).

Bring all issued tactical gear and BDU type uniforms that are acceptable to get fake blood on. This course can be physically demanding due to carrying casualties and performing simulated tactical operations so be physically prepared for this prior to course attendance.

This course was designed for the pre-hospital provider or dedicated medic in mind. Skills taught in this course include higher level, paramedic level skills and others may find some taught skills are beyond their scope of practice.

Many students have attended with no prior medical knowledge or training, but the course

is designed for a student with at least an Emergency Medical Responder background. This course is ideal for the tactical medic, whether in support of military operations, SOF, or tactical law enforcement.
